

ISS Standards

The ISS Wall Standards are made with extruded aluminum in a clear anodized finish with two choices of design. The simple standard can be surface or recessed mounted between wall panels. The Designer standard is surface mounted with a sleek appearance. All sizes of the ISS Brackets will work with the ISS Wall Standards and are infinitely adjustable along the vertical channel. Just mount the standards to the wall using #6 screws (included) into studs or with wall anchors and then position the brackets at the desired height.

	Item Number	Description	Profile
	SS-100	1' Simple Standard	Offers the benefit of the infinite channel design with a minimal appearance. Applications may be surface or recess mounted. The dimensions are .7" wide by .53" deep.
