COMPANY

Homasote® board, 98 percent post-consumer paper content with no harmful chemicals or formaldehyde additives, is uniformly manufactured with protection against termites, and resistance to mold, mildew and moisture.

Building Code Now Calls For Strict Sound Control

Build quiet floors and walls with 440 SoundBarrier®

IBC Section 1207 Sound Transmission

1207.1 Scope. This section shall apply to common interior walls, partitions and floor/ceiling assemblies between adjacent dwelling units or between dwelling units and adjacent public areas such as halls, corridors, stairs or service areas.

1207.2 Air-borne sound. Walls, partitions and floor/ceiling assemblies separating dwelling units from each other or from public or service areas shall have a sound transmission class (STC) of not less than 50 (45 if field tested) for air-borne noise when tested in accordance with ASTM E 90.

1207.3 Structure-borne sound. Floor/ceiling assemblies between dwelling units or between a dwelling units and public or service area within the structure shall have an impact insulation class (IIC) rating of not less than 50 (45 if field tested) when tested in accordance with ASTM E 492.

Sound Ratings

(IIC) Impact Insulation Class

Single-number rating that indicates the amount of impact noise isolation provided by a floor/ceiling assembly. The higher the number, the quieter the floor/ceiling assembly.

(STC) Sound Transmission Class

Single-number rating that indicates the sound transmission loss of a partition or ceiling system between adjacent closed rooms.

STC Ratings

- 25** Normal speech can be understood clearly.
- 30** Loud speech can be understood fairly well.
- 35** Loud speech audible but not intelligible.
- 42** Loud speech audible as a murmur.
- 45** Must strain to hear loud speech.
- 48** Some loud speech barely audible.
- 50** Loud speech not audible.

COMPANY

Controlling sound through millions of square feet of residential and commercial floors and walls over the past two decades, 440 SoundBarrier® is a lightweight, economical, 1/2-inch panel that on-site framers install easily.

Nailable, structural, mold-and-mildew-resistant, with nearly twice the R-value of wood, 440 SoundBarrier is the dry alternative to lightweight concrete. It weighs less than poured lightweight concrete and does not introduce moisture into the structure, an important consideration in today's mold-conscious world.

440 SoundBarrier reduces sound transmission through all floor finishes, including hardwood, floating wood/laminate, vinyl and other sound-projecting surfaces. Check with technical support for the latest installation instructions.

Homasote Company is unique. It's America's oldest manufacturer of building products from recycled material, where each production day up to 250 tons of post-consumer paper is pulped and then molded into Homasote® board – the basis of all Homasote Company products, including 440 SoundBarrier.

We've been green building since our factory was built in 1909, more than 60 years before the first Earth Day. As a member of the U.S. Green Building Council, our company is proud to offer products that architects, designers, specifiers and developers know can help contribute towards aggregate LEED® credits.

Sizes (all nominal)

Thickness	Sizes	Weight lbs./sq. ft.
3/8"	4' x 8'	1.0
1/2"	4' x 4', 4' x 8', 4' x 10'	1.2
5/8"	4' x 8', 4' x 10'	1.5
3/4"	4' x 8'	1.8

Other sizes available upon request.
