

# Everything Fits

Hospital and healthcare interiors have to meet a number of requirements at once – they must adhere to Indoor Air Quality guidelines, health codes and NSF regulations as well as fit tight budgets. Ideally, material selections should also contribute to a healthy environment for employees and inspire comfort and healing in patients. Dwyer is your single-source supplier for modular GREENGUARD® Certified casework, countertops and nourishment stations. Only Dwyer offers hypoallergenic products for procedure and patient areas that are as attractive as they are functional.

### Dwyer fits healthcare specs and Indoor Air Quality guidelines

Low-emitting surfaces are a critical component of healthcare casework and nourishment stations. Dwyer has solutions to fit a spectrum of objectives – from stainless steel cabinets and countertops for the most sanitary work surfaces to the comforting warmth achieved by pairing steel cabinet boxes with thermofoil doors (see our cover image). All of our unique combinations are GREENGUARD certified, and the style and finish selections are almost endless.

### Dwyer fits durability requirements

Nourishment stations must be built to sustain around-the-clock use by healthcare personnel, while providing all the capabilities needed to meet dietary and between-meal needs of patients. Durable materials from Dwyer – such as steel and aluminum – meet and exceed ANSI/KCMA requirements for severe-use cabinets.

### Dwyer fits space restrictions

Choosing Dwyer gives you greater flexibility – our casework components are modular and designed to be easily relocated.

### Our KCMA and GREENGUARD®-certified cabinets for healthcare facilities can:

- Contribute to IAQ and reduce risk of allergic reactions in patients or staff to toxins found in laminate cabinets
- Prevent insect and pest damage naturally – without harmful chemical sealants
- Eliminate moisture, rot and warping problems associated with traditional laminate cabinets
- Achieve greater ROI by choosing cabinets that will last the life of the building and can be refaced rather than replaced

### Dwyer fits the environment

Share our commitment to sustainable design by choosing Dwyer cabinets and nourishment stations. Made from environmentally friendly materials like stainless steel to help sustain indoor air quality and reduce the risk of “sick building syndrome”, Dwyer cabinets have met the highest level of GREENGUARD Indoor Air Quality Certification for low-emitting interior building materials. In addition, our eco-friendly materials also can help you gain LEED points in the U.S. Green Building Council’s rating system for commercial developments.

For more than 80 years, Dwyer has provided flexible, high-quality cabinet, countertop and small footprint kitchen solutions. We supply a wide array of casework, nourishment stations and full-service kitchens that combine sustainability and space efficiency with performance and style. Dwyer steel and thermofoil cabinets are GREENGUARD Indoor Air Quality Certified® as low-emitting indoor building materials – they also received the GREENGUARD for Children & Schools™ Certification, the most

stringent standard for building materials that considers heightened sensitivities to chemical emissions. Dwyer cabinets are also KCMA certified, with configurations designed to meet the needs of the healthcare, student housing, assisted living, military and public housing markets. **Visit [www.dwyerproducts.com](http://www.dwyerproducts.com).**
