

Railing Systems for Commercial Buildings

Hollaender Interna-Rail® railing systems offer “a painless alternative” to stainless steel custom railings. The aluminum frame combined with a vast variety of infill panel options, provides an aesthetically pleasing appearance at a cost that is often half of a similar stainless steel system. When a more “industrial” look is desired, Speed-Rail® fills the need.

Commercial market needs:

- Aesthetics are often the key element, especially when the railing is in a prominent location in the building.
- Increasingly, first cost and annual maintenance cost are critical.
