## SIDE COILING FIRE & SMOKE DOOR SYSTEMS

### MODEL S4000

**Product Description:** The automatic resetting S4000 Fire Door Systems are side coiling fire doors that are approved with up to a 3 hour fire rating. The S4000 Fire Door Systems are side activated which allows for the fire doors to navigate around curves and contoured openings.

**Product Advantages:**

- The S4000 Fire Door Systems are easy to test and automatically reset.
- The S4000 Fire Door Systems require only 7" of headroom and can be designed as bi-parting fire door systems.
- The S4000 Fire Door Systems do not require electricity or battery back-up systems when they are activated in the self-closing fire condition mode.
- S4000 Fire Door Systems are available without floor tracks.

**Design Alternatives:** The S4000 Fire Door Systems can be used when a conventional Auto-Set® Fire Door does not provide a solution due to headroom restrictions or at separations where the ability to navigate around contoured openings and tight curves is a requirement.

**Applications:** The S4000 Fire Door Systems are ideal for schools, hospitals, casinos, retail and museums, or any finished area. The S4000 Fire Door Systems provide a solid solution for fire protection in area separation walls, occupancy separations, and corridor separations.

S4000 Side Coiling Fire Doors are undetectable when in the fully open, stored and fire ready position.....

When activated, the fail-safe system begins to close without the aid of electricity or battery back-up.....creating the fire & smoke protection necessary for the opening.

**S4000 SIDE COILING FIRE DOOR SYSTEMS CAN BE DESIGNED AS BI-PARTING UNITS WHICH CAN PROVIDE FIRE & SMOKE PROTECTION FOR OPENINGS IN EXCESS OF 300 FEET IN WIDTH!**
