Robbins. Still the Leader.

Robbins — Commitment to Environmental Stewardship

At Robbins, leadership in product design doesn't just apply to athletic performance and product quality—it also extends to our commitment to using natural resources wisely and improving indoor air quality during installation. Our state-of-the-art manufacturing technologies maximize the use of raw materials while reducing the impact on the environment. This reflects the foundation of our product development —increasing product quality and performance while decreasing raw materials usage. We actively participate in organizations like the United States Green Building Council, who support sustainable development and reforestation efforts.

Indoor Air Quality Robbins Factory Sanded and Factory Prefinished flooring not only reduce jobsite dust, debris and VOC generation, you get a better looking floor since you eliminate the possibility of field equipment malfunction. Plus, factory controlled dust and fume collection systems don't just move the problem from the gym to the factory, we actually capture and minimize releases to the environment.

Maximizing Use of Natural Resources In addition to exhibiting better athletic performance characteristics than traditional 25/32" thick flooring, Continuous Strip® XL450™ uses a third less raw material to produce, yet has the exact same wear life! And, there's almost 50% less material destined for disposal after its useful life. Because of its thinner profile you can ship 67% more flooring per truck, reducing fuel consumption and diesel emissions per square foot of installed flooring. More than 3MM square feet have been installed since XL450 was first introduced.

Robbins' Sportwood product, in addition to making great gym floors, is made from post-production process material that would otherwise be used as boiler feedstock. Sawdust waste is used to feed boilers that help generate power to run our production facilities.

To learn more about how Robbins can help you obtain LEED credits on your project, please contact your Robbins Regional Manager. They can provide you with information detailing the actual value that a Robbins system contributes to your project:

- **Construction Waste Management** — MR Credit 2.1 & 2.2
- **Resource Reuse** — MR Credit 3.1 and 3.2
- **Low Emitting Materials** — EQ Credits 4.1 and 4.4
- **Certified Wood** — MR Credit 7
- **Recycled Content** — MR Credit 4.2
- **Regional Materials** — MR Credit 5.1 and 5.2

ROBBINS' INDUSTRY-LEADING PORTFOLIO OF SYSTEMS FEATURES THE PERFORMANCE ENHANCING CHARACTERISTICS OF CONTINUOUS STRIP® XL450 MAPLE

NEW MVP-The Players' Choice The ultimate in player performance, safety and comfort, this revolutionary design concept stops damaging, energy-robbing vibration in its tracks and provides Maximum Vibration Protection. Independent tests by world renowned biomechanics researcher, Dr. Benno Nigg, indicate that this system is in a class by itself.

Bio-Channel® LP Star A great performing system just got better. Now available in a low profile DIN rated version, this system builds on the legacy of the Bio-Channel® family of sports flooring systems.

Bio-Star LP The only floating floor to exceed all the DIN 18032 Part 2 (2001) test criteria, the Robbins Bio-Star LP system is a lower profile system to complement those facilities that need a lower profile DIN rated floating system.

Bio-Cushion® ELP You don't have to sacrifice quality and good performance with the extra-low profile Bio-Cushion ELP. Designed with many of the same features as our higher end floating systems, this is a great package for the budget conscious owner who wants a maple system.
