METAL ACCESS PANELS

JL Industries, a division of the Activar Construction Products Group, features a full selection of metal access panels for interior and exterior applications. Our line of fire-rated panels are UL-listed and Warnock Hersey-rated.

JL Industries provides a wide range of specialty products for commercial construction, including fire extinguishers and cabinets, floor gratings and mats and life safety products. We have been providing our customers a large selection of products for any project for over 60 years.

JL Industries is dedicated to providing our customers high-quality products along with excellent customer service. Our innovative Spec-Ease program assists architects in specifying the JL Industries products that meet their building requirements. Please visit WWW.JLINDUSTRIES.COM for additional details.

Model FD - Fire-Rated Access Panels:

Specify Model FD when you need to provide access to utilities in the walls or ceilings of stairwells, shafts, corridors and any other areas where fire ratings are important. Frames are equipped with masonry anchors and bolt holes. Doors are furnished with an automatic closer and latch automatically when door is released. The door panel has 2" of insulation in a sandwich-type construction. The FD Series can be installed in fire rated walls or ceilings and maintains the fire barrier ratings. These panels carry Underwriters Laboratories 1-1/2 hour "B" label rating for wall applications and the Warnock Hersey label for 3-hour non-combustible and 1-hour combustible floor/ceiling assemblies.

Model TM - for Drywall, Masonry and Tile:

This all-purpose 16 gauge steel access door affords fast and convenient access for inspection or service to vital components of plumbing, heating, air conditioning and/or electrical systems. The 1" frame flange adds rigidity and conceals rough wall openings. The concealed hinged door is mounted to the frame and swings open for ease in servicing and results in a door always closing square in place. The unit is secured with screwdriver-operated cam locks, and a key-operated cylinder lock can be furnished in place of one cam lock.

Model TMS - Stainless Steel Access Panel

This J.L. access panel is of the same high quality design as the Model TM, except that it is made of stainless steel with a #4 satin finish. The TMS meets the requirements of hospitals, restaurants and other high traffic areas where appearance, durability and extra resistance to impact and corrosion are the prime concerns. The TMS is fabricated for use in masonry, plaster and drywall surfaces. Flush mounted screwdriver latches are standard and key operated locks are available.

www.jlindustries.com

MODEL WB for Drywall

The Model WB access door eliminates visual distraction created by projecting, surface-mounted units because it is designed for flush installation in a drywall surface. A special drywall bead covers the outer frame so that drywall cement may be applied to cover and conceal the flange while wallboard joints and corners are being cemented. The access panel has a prime coat that provides an excellent base for finish painting to blend with wall surfaces.

Model WB door sizes are dimensioned to fit wood stud or steel drywall stud spacings of 12", 14", 16" or 24" on center. The panel also operates on a concealed hinge. The cam lock is operated by standard screwdriver (a key operated cylinder lock can be provided in place of one cam lock).

MODEL PW and PWE for Plaster Surfaces

Model PW features a 3/4" plasterguard and is ideal for use in plaster walls or ceilings. Optional PWE includes 3" wide expansion wings of metal lath at an additional charge. This model is factory-primed to provide an excellent base for finish paint. The panel also operates on a concealed hinge. The cam lock is operated by standard screwdriver (a key-operated cylinder lock can be provided in place of one cam lock).

MODEL CT For Tile or Drywall Ceilings

Sound control and appearance are the important features of Model CT. To blend with plaster or tile, units are painted white. Acoustical tile up to 1" thick is accommodated by the recessed panel. Adhesive mastic of adequate depth attaches the tile to the door and ensures that it is flush with adjoining tile field. A continuous hinge, located at the outside edge of the door ensures easy opening of the plaster or tile covered panel. Screwdriver operated cam locks are provided, the size of the door determining the number. If desired, a key-operated cylinder lock, in place of one cam lock, can be furnished.

Model AAF - Aluminum Angle Frame Floor Door:

Model AAF aluminum angle frame floor door is designed to support a 300 psf load capacity. This door is manufactured with an extruded aluminum frame and a 1/4" diamond plate aluminum cover. Standard features include a stainless steel slam lock, hold open arm, gas assist opener and bituminous coating.

Model XP Exterior Access Panel:

The XP panel is designed to be used in Exterior applications. Manufactured with a 16 gauge galvanized steel frame and an insulated .040 aluminum door, this door is designed to stand up to the elements.

Model SP Security Panel:

JL model SP is designed for security applications. Manufactured with a 2" x 2" x 3/16" angle frame, 10 gauge steel door and security hinges. This panel provides the strength and security needed in detention environments. The panel can be prepped for either detention lock or mortise cylinder applications.

The Activar Construction Products Group (ACPG) consists of 5 affiliated companies that serve the commercial construction industry. Our multiple product lines are a single source for architects and distributors. Air Louvers manufactures products for the openings market with door lites, louvers and rated glass. Hiawatha is known for its quality architectural door hardware and frameless shower door products. JL Industries is an industry leader in fire protection, providing fire extinguishers, AED's and cabinets, access panels, roof opening products and entrance flooring systems. Samson Products manufactures many of the products sold under the JL label and distributes JL products on the West Coast. Thomas Enterprises is our Southeast distributor for JL products and has a state-of-the-art aluminum fabrication facility for fire extinguisher cabinets sold under the Thomas and JL labels.
